NEWSSTAND EDITOR'S PICKS

Better Outcomes Seen for Stroke Patients Taken Directly to Thrombectomy Hospitals, but Protocols Lacking

Patients with acute ischemic stroke due to a large vessel occlusion who present directly to an endovascular-capable hospital receive more rapid treatment and have improved clinical outcomes, including better functional independence, than those who require transfer, according to recently published data from the STRATIS registry.

pulseTV VIDEO: New Technology to Treat Chronic Total Occlusions (CTOs)

Farouc Jaffer, M.D., Ph.D., director of coronary interventions at Massachusetts General Hospital, discusses the newest advances and technologies for treating chronic total occlusions (CTOs) at ACC.17.

Mobile Health Technologies May Boost Diagnosis, Care for Patients With Structural Heart Disease

Mobile health (mHealth) technologies, particularly in parts of the globe with less access to standard diagnostic technology and care, may help with swifter diagnosis and treatment decisions in patients who present to tertiary care clinics with structural heart disease, new research indicates."

VIVA 2017 Late-breaking Clinical Trial Presentations

Here are quick summaries for all the key late-breaking vascular and endovascular clinical trials presented at VIVA 2017.
